International Steels Limited

International Steels Limited

Fracts, acre, lade, jaw, so has 27% of the market with 23,000 new customers and has a market share of 2,000%

Compact Cold Rolling Mill

Pakistani cold rolled product is at a premium. Our company is the leading cold rolled mill in the market.

Pickling line

Steel line at 1,000,000 tons per annum is capable of producing high-quality steel products. Currently, we have a pickling line with a capacity of 350,000 tons per annum.

Compact Cold Rolling Mill

Our Compact Cold Rolling Mill has a capacity of 150,000 tons per annum and is capable of producing high-quality cold rolled steel products.

Corporate Excellence Award

In 2019, International Steels Limited won the Corporate Excellence Award from the Pakistan Management Association of Pakistan.

International Steels Limited
Annual Report 2020

Compact Cold Rolling

The Compact Cold Rolling process is a revolutionary method for producing high-quality steels. It involves rolling hot, soft steels through tightly spaced rolls while they are in a plastically deformed state. This process not only saves energy by reducing the amount of heat required for the rolling process but also improves the final product's quality by ensuring uniform thickness and porosity.

The compact cold rolling process is ideal for producing a wide range of steel products, including springs, bushings, and automotive parts. It offers several advantages over traditional hot rolling methods, such as lower energy consumption, reduced production time, and improved material properties.

Compact cold rolling is a significant advancement in the steel manufacturing industry, offering a more efficient and environmentally friendly way of producing high-quality steel products.
International Steels Limited

The global steel industry continues to grapple with the impacts of COVID-19, leading to a $30bn revenue loss globally.

In Pakistan, the steel industry has been significantly affected. The Steel Business Plan (SBP) has projected a revenue loss of $2.6bn in 2020.

The Pakistan Steel Mills (PSM) has seen a decline in production and sales. In addition, the country’s export earnings have also been hit, resulting in a 14.6% drop in exports.

The government has introduced various measures to support the industry, including tax breaks and increased funding.

In India, the steel industry has also been impacted, with a 14.6% decline in production and a 13.25% drop in sales.

International Steels Limited (ISL) has been affected by the pandemic, with a 10.2% reduction in volumes and a 10.2% decline in revenue.

The company has taken steps to mitigate the impact, including diversifying its product line and exploring new markets.

In China, the steel industry has seen a mixed impact. While some segments have been hit, others have seen growth, reflecting the country’s robust demand for construction materials.

Overall, the steel industry continues to navigate the challenges posed by COVID-19, with a focus on adapting to new market conditions and finding ways to mitigate losses.
